***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1- 3, 6-17, 25-28, 31-35 are rejected under 35 U.S.C. 102(e) as being anticipated by Tran, Pub. No. US 2002/0019954.

3. Claims 1, 11, 14, 25, Tran teaches an energy detect with auto pair select system [*title, abstract, Figs. 3-4*], comprising:

a device that is operable to perform energy detection with auto pair selection [*device 28 of Fig. 3*];

a plurality of wire pairs that is communicatively coupled to the device [*RD 95 and SD 120 of Fig. 3*]; and

wherein the device generates a qualified energy by considering an energy associated with at least two wire pairs within the plurality of wire pairs [*abstract, para 0006, 0027*];

the device uses the qualified energy to determine whether at least one additional device is communicatively coupled to the device via at least one wire pair within the plurality of wire pairs [*abstract, para 0006*]; and

the device performs auto power down when no device is communicatively coupled to the device via the wire pair [*abstract, para 0006*].

Art Unit: 2116

4. Claims 2, 15, 28, Tran teaches the auto power down comprises a partial auto power down [*minimized power operating mode, para 0031*].
5. Claims 3, 12-13, Tran teaches the device performs auto media dependent interface crossover functionality when the wire pair is transposed with at least one additional wire pair [*see Fig. 3 and related disclosure*].
6. Claims 6, 31, Tran teaches the device uses the energy of at least one wire pair within the plurality of wire pairs as the qualified energy when the device does not transmit a link pulse [*abstract, para 0006*].
7. Claims 7, 32, Tran teaches the plurality of wire pairs comprises at least one of a receive wire pair and a transmit wire pair [*RD 95 of Fig. 3*].
8. Claims 8, 33, Tran teaches a state machine that is operable to determine connectivity of the device with the plurality of wire pairs [*the transceiver state machine, abstract, para 0007*].
9. Claims 9, 17, 34, Tran teaches the state machine is operable to change an operational state of the device based on whether at least one additional device is communicatively coupled to the device via at least one wire pair within the plurality of wire pairs [*abstract, para 0007*].
10. Claims 10, 16, 27, 35, Tran teaches the device performs wake up from a standby state when the device determines that the at least one additional device is communicatively coupled to the device via the wire pair [*see wake-up control 135 of Fig. 4 and related disclosure*].
11. Claims 26, Tran teaches performing auto negotiation between the device and at least one additional device [*para 0027 and 0035*].

***Allowable Subject Matter***

12. Claims 4-5, 18-19 and 29-30 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

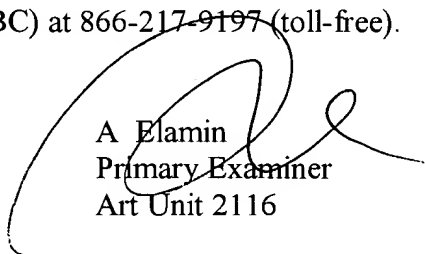

13. Claims 20-24 and 36-44 are allowed.
